Automating Data Import and Relationship Mapping Using Import Sets & Dot Walking

1.IDEATION PHASE

1.1 Problem Statement

PROBLEM STATEMENT- 1 : **Data Administrator**

I am: Data Administrator

I'm trying to: Import large volumes of data into the system efficiently

But: Data relationships between tables are difficult to maintain

Because: Data comes from multiple external sources and requires manual mapping

Which makes me feel: Frustrated and the process becomes time-consuming and error-prone

PROBLEM STATEMENT -2: **System Manager**

I am: System Manager

I'm trying to: Maintain accurate and reliable data in the system

But: Manual data import and relationship mapping often creates errors

Because: Data fields are not automatically linked across tables

Which makes me feel: Uncertain about data accuracy and system reliability

IDEATION PHASE

Problem Statements (Customer Problem Statement Template)

PS	I am (Customer)	I'm trying to	But	Because
PS-1	Data Administrator	import large volumes of data into the system	data relationships are difficult	data is coming from multiple external sources
PS-2	System Manager	maintain accurate data relationships	manual mapping creates errors	data fields are not automatically linked
